

Thanks so much for being one of our first Wave Cannon™ customers! It means a great deal to us that you have taken a chance on a new company for your sonic needs.
 Made in the USA – Amber Waves of GAIN!

Our “shape” control comes with the blessing of Philip Ruetz of Ruetz Amplification. It refines the frequency response and grit, and is more pronounced at lower gain settings.

The “rock hands” control the overall level of gain in the circuit. We’ve worked hard to give this pedal a broad range of distortion and allow you to craft your sound.

The “stack” allows you to control the overall treble flavor of the pedal. By backing this control down, the Wave Cannon can thrive even with brighter, super-clean amps.

“Speaker” is the overall output of the Wave Cannon. Make no mistake, this pedal can get PLENTY LOUD. You may consider yourself warned.

HAVOC SWITCH™! (Custom only) Flip the switch and go wild! Work the knobs on the pedal and the controls on your guitar. Damage to your amp/ears is not our responsibility. Only works if Cannon is first in pedal chain, or prefaced by true bypass boxes that are turned off.

IMPORTANT! If you use a power supply, use 9 volts DC, negative tip only – BOSS PSA-120 or equivalent. Do NOT use 18vDC or any AC power into the Cannon. Warranty does not include abuse or misuse of the product.
 Thanks again for purchasing the Wave Cannon™!

FRONT

SAMPLE SETTINGS – FLAVOR TO TASTE

“I just need a bit of boost, to give me more volume and some grit.”

“I need some overdriven crunch so I can write some great riffs and upstage my singer.”

“My vengeance against my adolescent tormentors will arrive as 32nd note fury.”

“I cannot say what I was doing that day. Or any day, for that matter.”

“We come in peace. Now, take us to your leader, and tell us about your natural resources.
 100110011001110101...”
