

If you thought three knobs and the truth was easy, imagine two knobs and a switch! The BLUES DOCTOR controls how much grit is in your signal. The BLUES LAWYER asks how you like your "blues": vintage, or modern vintage? And the BLUES FINANCIAL PLANNER assesses the marketplace and decides how much "blues" the audience can handle!

On the inside there is a small trimpot marked CRYSTAL LETTUCE that sets the collector voltage of the BC108 transistor. This fine tunes the minimum gain and maximum range of the device. We set it to a healthy balance of 7 volts, but you may flavor it to taste.

Front

Yes, we all know the best amplifiers for this style of music should cost more than the average working person's automobile, but if you aren't #blessed to own one of those, "The Blues" will deliver all the delicious artisanal mojo infusion vintage boutique hardwired bespoke sonic unobtainium you've ever been craving. On one mode the grit goes from minty well preserved black tolex to the warped particle board of a coveted pawnshop prize. On the other resides the crunchy, chewy sounds of that fraying tweed amp covered in drink glass stains and cigarette burns that the studio would never let you borrow cause they would never get it back.

So even if you have led a life of relative splendor and comfort, what can you do when you're having a 'just my luck' kind of day? You probably shouldn't try to sing the blues, but you can certainly play "The Blues."

Your pedal was dreamed, designed, and wired by hand in our workshop in Columbia, S.C. Thank you for letting us do the crazy/silly/fun stuff like this.

musical/personal agenda			
"If Caroline released this pedal as a joke, maybe they should continue to not take themselves seriously."			
"There - that pinched, kind of crackly, clean but not clean thing. Turn on that echo machine and play single notes."			
"OK, I'm actually kinda surprised how good this thing is as an overdrive."			
"So you want to have the sound of a blown up amplifier...and also blow up your amplifier? Got it."			

IMPORTANT: if you use a power supply, use only a 9V DC center negative tip power supply, BOSS PSA or equivalent industry standard units. Unplug cable from input when not in use to save battery life. Our warranty only covers component failures or manufacturing defects - it does not cover misuse or abuse of the product, modifications or unofficial repair work. Contact *us* for service.
